DMEPOS COMPLIANCE & ACCREDITATION

The DMEPOS Readiness Checklist

For accreditation, Medicare enrollment & unannounced site visits · 2026 edition

Use this checklist to pressure-test your operation before a surveyor or auditor does. Work through each section and mark the items you can prove with current, on-file documentation - not the ones you "have handled." If you can't put your hands on the evidence, it's a gap. The 2026 rule changes (highlighted below) make continuous readiness more important than ever.

1 Accreditation & supplier standards

- ☐ Current accreditation certificate on file, with the accrediting organization and expiration date tracked
Know your reaccreditation date - it's now annual (see 2026 changes).
- ☐ Written policies and procedures that match all 30+ DMEPOS supplier standards you bill under
- ☐ Quality standards documentation (performance management, complaint handling, adverse events)
- ☐ Product-specific policies for every category you supply (oxygen, CPAP, mobility, orthotics, etc.)
- ☐ Proof that day-to-day operations actually match the written program
Surveyors check reality against the binder - not just the binder.

2 Medicare enrollment (CMS-855S / PECOS)

- ☐ CMS-855S enrollment complete and accurate, with a copy of the submitted application on file
- ☐ All practice locations, product categories, and authorized officials listed correctly
- ☐ Correct NPI, tax ID, and legal business name matching across CMS, the AO, and your bank
- ☐ Surety bond (\$50,000 per location) active and on file, with renewal dates tracked
- ☐ Enrollment changes (address, ownership, categories) reported to CMS within 30 days

3 Licensure & credentials

- ☐ State DMEPOS/business licenses current for every location and product line
- ☐ Staff licenses, certifications, and competency records on file and unexpired
- ☐ Written scope-of-practice and delegation documentation where required
- ☐ Liability insurance certificates current and meeting CMS minimums

4 Documentation & delivery

- ☐ Proof of delivery on every claim, signed and dated, matching the order
Delivery documentation is one of the most common audit failure points.
- ☐ Valid physician orders / detailed written orders before billing
- ☐ Medical necessity documentation retained per CMS timelines
- ☐ Beneficiary authorization and assignment-of-benefits forms on file
- ☐ Equipment tracking, maintenance, and recall records maintained

5 Corporate compliance & program integrity

- ☐ Documented Fraud, Waste & Abuse (FWA) compliance program
- ☐ Monthly OIG / SAM exclusion screening for staff, owners, and vendors - with records kept
- ☐ Chart audit process running on a schedule, with findings and corrective actions logged
- ☐ Denial tracking (expected and unexpected) to catch documentation patterns early
- ☐ A named compliance officer and an annual staff training record

6 Site readiness for an unannounced survey

- ☐ Physical location meets DMEPOS site requirements (hours posted, signage, accessible)
- ☐ Required postings and consumer information visible to patients
- ☐ Complaint process posted and a complaint log maintained
- ☐ Emergency preparedness plan documented and staff-trained
- ☐ A "survey-ready" master binder a surveyor could open and follow today

WHAT CHANGED FOR 2026 - DON'T GET CAUGHT OUT

- **Annual reaccreditation:** the three-year cycle is gone. Your program has to hold up every year now.
- **New locations must be surveyed *before* accreditation** - the old three-month grace period to operate first is gone.
- **Accreditation doesn't transfer** after a merger, acquisition, or sale. Notify CMS, the NPEC, and your AO when ownership changes.

Not sure where you stand? Let's find your gaps together.

This checklist shows you what to look for. A free DMEPOS Readiness Review shows you exactly where *your* operation stands - and what to fix first, in what order, for your timeline.
